Top Skills

Dataiku DSS

Generative AI

Snowflake

Languages

English (Native or Bilingual)

Yoruba (Native or Bilingual)

Certifications

Machine Learning

Electric Power Systems

Introduction to Programming Using Python

Health, Safety & Environment Management Competence

Introduction to Sustainability

Honors-Awards

Best Graduating Student,
Department of Petroleum and Gas Engineering.

Dr. D.K. Olukoya Academic Award of Excellence

Vice-Chancellor Scholarship

3rd Place, Intern South East bpChallenge

Emmanuel Oyedeji

Data Scientist at British Airways | AI/ML, GenAI, LLMs, Python, Snowflake | Data Products & Automation
London Area, United Kingdom

Summary

I deliver Generative AI, machine learning, and automation solutions that enhance commercial and operational decision-making at British Airways. My work spans end-to-end delivery, from problem framing and modelling to deployment and adoption, ensuring that AI products deliver real business value. I've contributed to both Commercial and Engineering functions, building GenAI assistants, profitability models, predictive analytics, anomaly detection, and automated workflows used across the organisation. My experience includes developing AI-driven tools that improve planning, strengthen financial insight, and streamline engineering processes. Technically, I work with Python, SQL, Snowflake, Dataiku, Tableau, Git, LLMs, RAG, and optimisation methods, with a strong focus on production-quality solutions and scalable architecture. I'm passionate about applying AI responsibly and practically, collaborating with cross-functional teams, and helping organisations unlock new capabilities through data-driven decision intelligence.

Experience

British Airways

2 years 8 months

Data Science Consultant

October 2025 - Present (8 months)

Greater London

Delivering end-to-end Generative AI and ML solutions, including a multilingual GenAI assistant taken from prototype to enterprise rollout.

Graduate Data Scientist

October 2023 - September 2025 (2 years)

Greater London

- Designed and productionised a profitability and value-modelling framework using Python and SQL, replacing legacy tools and enabling more accurate, AI-supported commercial, loyalty and financial insights.

- Built and deployed AI-driven automation using Python, Dataiku and Tableau, transforming compliance and operational workflows and embedding intelligent, data-driven decision-making into engineering processes.
- Developed predictive and anomaly-detection models using statistical ML methods, SQL pipelines and Python, enabling earlier risk identification, improved maintenance intelligence, and more efficient resource planning.

Enstar Group

Finance Intern

June 2023 - August 2023 (3 months)

City of London, England, United Kingdom

- Developed fundamental knowledge of run-off insurance operations.
- Gained hands-on experience in financial data management, including variance analysis, reconciliation, and record keeping.
- Participated in team meetings and cross-functional projects, gaining exposure to different aspects of the finance function in reporting, taxation, and actuary.

bp

Reservoir Engineering Intern

June 2022 - September 2022 (4 months)

Sunbury-on-Thames, England, United Kingdom

- Collaborated with a multidisciplinary team to develop a gas reservoir offshore Mauritania and Senegal as part of the GTA project.
- Modelled water movement in the first development gas well using Nexus and Python.
- Optimized the vertical stand-off for perforation in a high-rate gas well to prevent early water coning problems.

Flenox

Co-founder/Project Manager

June 2019 - August 2021 (2 years 3 months)

Ipaja, Lagos

- Co-founded a platform to provide underprivileged students with free online/offline education content for the Unified Tertiary Matriculation Examination.
- Developed the entire mathematics study materials that have impacted thousands of students.

Fiverr

Energy Writer

January 2018 - August 2021 (3 years 8 months)

- Wrote hundreds of articles in the energy niche, focusing on trending breakthroughs in solar energy adoptions.
- Written thousands of articles covering various niches, including health, digital marketing, science and technology, and software development for hundreds of clients in 28 countries, including the US, UK, Australia, Canada, South Africa, and China.

Bells University Of Technology

Graduate Research & Teaching Assistant

August 2017 - March 2020 (2 years 8 months)

Idi Iroko, Sango- Otta

- Taught over 250 second-year undergraduate students introduction to thermodynamics.
- Carried out research to investigate tidal energy adoption in four coastal areas (Akassa, Bonny, Calabar, and Lagos bar in Nigeria) using Nonlinear Autoregressive Network with exogenous points (NARX) model as a velocity predictive tool.
- Found three of the four coastal areas to be economically viable on a small scale using Levelized Cost of Energy for cost comparisons.

Oando Plc

Lubes Intern

September 2015 - January 2016 (5 months)

Apapa, Lagos, Nigeria

- Carried out research that successfully improved the high-temperature viscosity of high-grade synthetic lubricant using polymethacrylates by 6%.
- Carried out a wide range of tests on lubricant samples, including density tests, viscosity tests, flash point tests, pilot tests, among many others.
- Identified bottlenecks in the lube blending system and proffered inventive solutions.

Education

Teesside University

Master's degree, Petroleum Engineering · (September 2021 - May 2023)

University of Lagos

Bachelor's degree, Petroleum Engineering · (2012 - 2016)
